

Manage your services organization more effectively with integrated project management, project tracking and reporting with NetSuite Project Management. You can automate project creation when specific services are sold and automatically track percent complete and time budgeted and time spent on project tasks. Reports for utilization and backlog help analyze employee workloads and efficiency.

Benefits

- Improve oversight of your operations, maintain tighter control of project accounting.
- Understand the true costs of the services you render, and get an accurate and detailed view of profitability.
- Improve productivity and drive efficiencies.

Why NetSuite Project Management?

Project accounting is a key component in monitoring the progress of your projects and ensuring that your business remains profitable. NetSuite Project Management is essential to organize work and allow visibility into a complex operation.

NetSuite’s Project Management module seamlessly integrates with the NetSuite accounting system. In addition to project management and time and expense tracking, you can create and issue invoices, compare project performance to budgets and other metrics. NetSuite Project Management module manages revenue recognition, expenses, unbilled balances, and other project-related financials.

Key Capabilities

Manage Multiple Project Types

NetSuite manages multiple types of projects including time and materials and fixed price projects.

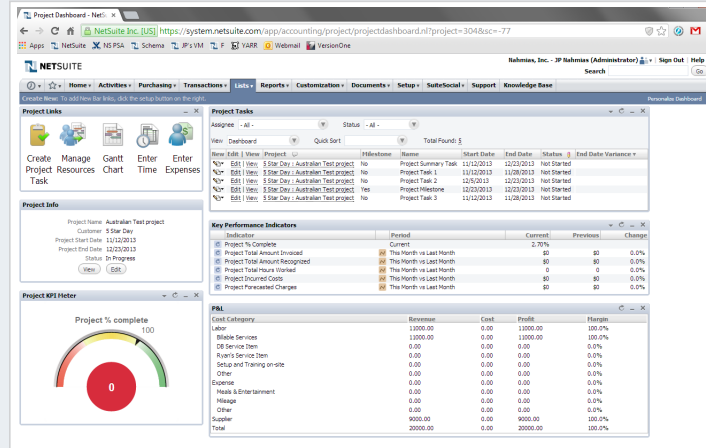

Automate Job Creation

You can automate job creation by identifying service items that will require a job; then, sales orders for those items go into a queue where you can assign ID and project manager, and bulk create many jobs with one click.

Organize Tasks and Activities

NetSuite also organizes tasks, calls and events, linking them to specific projects. Information regarding clients is managed in one place so resource tracking is complete and real-time for ever improving client service and can be segmented and leveraged for smarter client intelligence.

View Key Performance Indicators at a glance using Project Dashboard.

Project Management:

- Managing Multiple Project Types
- Automated Job Creation
- Task Management
- Project Tasks
- Project Dashboard
- Project Center
- Project Based Milestones
- Project Templates
- Project P&L Tab
- Gantt Chart
- Estimating Labor & Revenue
- Timesheets
- Mobile Time and Expense
- Projects Tied To Customers
- Project Billing
- Payroll Expense Allocation
- Budget and Actuals
- Project Tracking Reports

Project Tasks

You can create project tasks with multiple predecessors and finish-to-start (FS), start-to-start (SS), finish-to-finish (FF) and start-to-finish (SF) relationships. In addition, project tasks can be created with lag time between tasks and a Finish No Later Than (FNL) constraint.

Project Dashboard

The Project Dashboard gives project managers a visual, graphical analysis of the status of specific projects. Project managers can see important key performance indicators (KPIs) at a glance such as which projects are on time, under budget and destined for success. For projects that are behind, you can use the dashboard to quickly drill down and identify the root cause. As team members enter information, the dashboard updates automatically to provide you with an up-to-date view of the current health of your projects, while it's happening.

Project Center

With Project Management, you can assign project resources a standard consultant role with access to the Project Center. It provides a convenient way for consultants and project managers to view summary information about their projects and quickly enter transactions against those projects.

Project-Based Milestones

Project milestones are critical points that you monitor throughout the life cycle of a project. Milestones highlight important interim events, such as the completion of a phase, a delivery of materials and a payment for work performed. These milestones are useful, for example, in setting dates for billing and completeness of work.

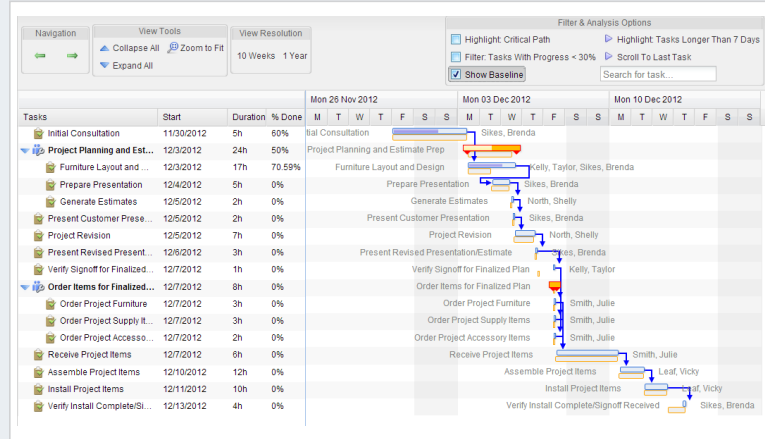

Project Templates

Project Templates are reusable templates that provide robust starting points for your projects, saving time and simplifying projects from beginning to end.

Project P&L Tab

With the Project P&L Tab, you can now track the progress and monitor costs associated with each project, keeping you on top of financial performance.

Get better visibility and better project monitoring capabilities with fully redone Gantt Chart.

Gantt Chart

An improved Gantt chart provides better visibility into project schedules. It is a useful tool for planning and scheduling projects, monitoring a project’s progress and illustrating start and finish dates including summary elements of a project.

Estimate Labor & Revenue

NetSuite estimates labor cost and revenue for jobs based on the number of hours entered times the loaded cost rate for each employee and anticipated billing amounts from the sales order linked to the job.

Timesheets

Timesheets allow you to enter and submit weekly timesheets, saving you time and effort. And with the timesheet record available to you in the SuiteCloud platform, you can customize your timesheet approval processes to suit your unique business needs.

Mobile Time and Expense

You can also use your iPhone to create and submit time and expense reports after completing a job, directly upload images of receipts, view time entries on a timesheet/week basis, and more.

Tie Projects to Customers and Bill Directly

Create project jobs and link them to specific customers, even create sub-jobs. When you create project tasks, and enter time against them, percent complete is automatically calculated and rolled up to the job level. Keep track of original and current estimated time to complete each task. Billing time back to customers enables you to enter time spent on a job for customers, and then bill the cost to them.

Project Billing

You can bill projects based on completing project work, achieving project milestones, or according to a schedule of dates. The billing schedule type specified on the project determines the type of project: Time and Materials Billing, Fixed Bid Interval/Milestone Billing Schedules and Charge-Based Project Billing. Also, billing forecasts can be generated based on the effort planned to be expended across the planned project billing interval to determine when you expect customers to be billed.
