

RF-SMART Advanced Distribution (WMS) Functionality for NetSuite

RF-SMART is built directly into NetSuite on the SuiteCloud Platform and supports an array of NetSuite's key Warehousing, Distribution (W/D) and Manufacturing functionality. As a native NetSuite application, you get the reliability, availability and performance of NetSuite in a world-class mobile data collection solution – without having to take-on or manage any additional technologies. Whether you are using NetSuite bins or advanced bins, with our Advanced Distribution (WMS bundle), you can take advantage of our powerful barcoding and WMS Lite type functionality.

Inventory Transfer

Transfers inventory from one user selected location to another location

- Supports bins, lot and serial items.
- Displays the last item collected.
- When transferring from/to a location with one bin, the bin is not collected.
